OVERALL DEFINITIONS

- General:** Market data refer to all products sold for final **human consumption** in retail, foodservice and artisanal markets (own-produced for own sale, e.g. independent bakers), thus excluding industrial and intermediate consumption, and auto-consumption.
- Product:** All product markets are carefully defined so as to be comparable across all countries. Special cases in a few country and product markets are specified.
- Prices:** Retail prices (including VAT, excise and other indirect taxes) and foodservice buy-in prices are applied throughout.
- Company** These are expressed as a percentage of the total retail and foodservice market by value.
- Market Shares:** Company market shares of less than 3% should be regarded as indicative.

METHODOLOGY

All countries are surveyed regularly, during which extensive company and other interviews are carried out. FFT also systematically gathers all publicly available data (from trade associations, government institutions publications, the press and other media). The definition above (final human consumption) ensures that double-counting among product markets. In turn, this enables comparisons across all country/product on a per capita or unit value or real growth basis, and allows all data to be summed by product, by country, or by category, allowing extensive cross-checking for verisimilitude.
